[BTCC](#) enables futures trading for more than 60 cryptocurrencies, including [Bitcoin](#) (BTC) and all major altcoins like as Ethereum (ETH), Solana (SOL), Cardano (ADA), Litecoin (LTC), and Dogecoin (DOGE). XRP, among many others. [BTCC](#) offers both USDT-margined futures and coin-margined

futures to meet the diverse requirements of its customers.

[BTCC](#) also offers top liquidity for its users, ensuring that all orders on its online and app platforms may be executed at top pricing levels.

Why is Liquidity important ?

Liquidity is a critical indicator for the cryptocurrency market, similar to “traditional” fiat-centric financial markets such as foreign exchange (FX), commodities, and stock trading.

Liquidity generally refers to the ease with which a crypto trader can transfer one asset into another. When an asset A is easily convertible into cash or another asset B, traders refer to it as “very liquid.” Otherwise, it becomes illiquid: its “unrealized” or “paper” market price may be enticing, but it cannot be exchanged.

When a platform has deep liquidity, all assets on it can be instantly and predictably exchanged for one another. The most liquid cryptocurrency exchanges allow users to: **a)** swap huge amounts of cryptocurrency in a single transaction; and **b)** do so without significantly impacting the asset’s price. Consequently, only exchanges with robust liquidity support are ideal for traders with diverse deposits and trading techniques. The spread between “ideal” bid and ask prices is less when

liquidity is high.
