### How to Trade Bitcoin with Leverage on BTCC?

[Bitcoin](#) (BTC) is known as a volatile asset; the price of BTC reached an all-time high of roughly \$42,000 in January 2021, only to fall around \$31,000 within days. BTC previously reached a high of \$20,000 before falling to \$4,500 the following year. The Bitcoin price's extreme volatility presents trading possibilities for investors seeking potential returns through leverage.

[Leverage](#) is a popular financial instrument that allows investors to maximize their potential return on investment with a limited amount of capital. Leverage is widely used in a variety of financial instruments and is an important component in laying the groundwork for today's financial markets.

Many types of Bitcoin derivative products contain leverage. [BTCC](#), the world's longest [cryptocurrency exchange](#), for example, provides 10x, 20x, 50x, 100x, and up to 150x leverage for BTC/USDT futures contracts. Before making an investing decision, it is critical to grasp the ideas and mechanics of leverage.

**[Deposit and Receive Up to 10,055 USDT!](#)**

**[Trade on BTCC Now](#)**

## What is the Leverage?

Bitcoin leverage enables investors to gain maximum exposure to Bitcoin volatility with a little initial commitment, known as margin. Margin is defined as the amount of money that must be deposited into your account in order to achieve a given level of leverage.

For example, 20:1 leverage allows you to trade \$5,000 in Bitcoins with a \$250 margin deposit. If Peter purchased \$30,000 in Bitcoins at \$5,000 per BTC and the price increased to \$6,000 three days later. Without using any leverage, Peter will make \$6,000 in Bitcoin trading. However, if Tom utilizes 20:1 leverage, he only needs \$1,500 in margin to trade \$30,000 in Bitcoins and profit \$6,000.

Leverage trading is a two-edged blade that can enhance both your earnings and your losses. Using the preceding scenario, if the price of BTC falls to \$4,750, Peter will lose \$1,500 and have \$28,500 remaining. In a leveraged deal, however, Tom will lose all of his margin deposits.

Bitcoin's price is extremely volatile; it is not unprecedented for BTC to fluctuate by more than 30% in a single week. It is critical to carefully select the level of leverage that is appropriate for your risk tolerance.

For instance, Peter and Eric each have \$5,000 in their accounts. The Bitcoin price is currently trading at \$7,000. Peter is upbeat and chooses to open a \$200,000 BTC transaction with a leverage of 40:1. While Eric is cautious about the consequences of high leverage, he enters into a \$25,000 BTC transaction with a 5:1 leverage. If the price of Bitcoin falls by \$100 to \$6,900. Peter will lose \$4,000, leaving him with \$1,000 in his account. Eric, on the other hand, would have lost only \$500 and would still have \$4,500 in his account balance.

It is critical to understand that margin levels are not fixed and change over time depending on the price of the item being traded. If you hold a long position and the asset declines in value, you will receive a margin call informing you that you must deposit additional funds known as maintenance in order to keep your margin level. If you do not deposit more funds, your account will be liquidated.

In terms of liquidation. Many cryptocurrency exchanges have a widespread practice of covering someone else's negative balance with "insurance money," which are made up of other users' balances.

One of the unique features of BTCC is negative balance protection, in which the exchange will cover the user's negative balance entirely rather than forcing the user to liquidate or having other users

share the losses.
