How to Trade Litecoin (LTC) Futures on BTCC

For nearly immediate and cheap monetary transactions, Litecoin (LTC) is the [cryptocurrency](#) of choice. LTC is built on an open-source cryptographic system that allows for decentralized creation and transfer. In October 2011, the [Bitcoin](#) block was forked in a way that would become the [Litecoin](#) blockchain. That's why the Litecoin protocol is so similar to [Bitcoin](#)'s.

What is Litecoin (LTC) Futures

To buy or sell Litecoin at a specified future date and price is to enter into a Litecoin Futures contract. The value of the futures contract is based on the price of Litecoin, the underlying cryptocurrency. As a result, the value of a Litecoin futures contract follows the value of Litecoin rather closely.

Therefore, futures trading is an alternative to buying and selling the underlying cryptocurrency (aka spot trading). It is possible to make a profit in spot trading by purchasing Litecoin at a cheap price and then selling it when its value rises. However, you can only make money with this transaction if the price of Litecoin is rising. Spot trading is unavailable, however, during a down market. Further, in spot trading, you cannot use leverage.

Futures trading for Litecoin has a number of advantages over spot trading, including the option to long or short the cryptocurrency and to gain access to leverage.
