Pi Network Price Prediction 2024 - 2034

Year	Potential Low (ROI)	Average Price (ROI)	Potential High (ROI)
2025	\$41.48 (10.63%)	\$45.47 (21.25%)	\$49.45 (31.88%)
2026	\$45.43 (21.15%)	\$54.12 (44.32%)	\$63.57 (69.53%)
2027	\$49.24 (31.32%)	\$63.22 (68.58%)	\$79.61 (112.30%)
2028	\$52.83 (40.89%)	\$72.45 (93.20%)	\$97.08 (158.89%)
2029	\$56.10 (49.60%)	\$81.44 (117.18%)	\$115.21 (207.24%)
2030	\$58.95 (57.20%)	\$89.77 (139.39%)	\$132.99 (254.65%)
2031	\$61.29 (63.45%)	\$97.00 (158.67%)	\$149.23 (297.96%)
2032	\$63.05 (68.15%)	\$102.71 (173.91%)	\$162.69 (333.86%)
2033	\$64.18 (71.14%)	\$106.56 (184.17%)	\$172.21 (359.24%)
2034	\$64.62 (72.33%)	\$108.27 (188.73%)	\$176.87 (371.68%)

Pi Network Price Prediction 2024

The goal of the Pi network is to establish a decentralized cryptocurrency smart contract network,

enabling individuals to develop applications within it, where Pi miners serve as validators. Currently, the Pi token is trading within an accumulation phase, indicating a reduction in sell pressure. Although the precise date for the Pi Open Mainnet's launch remains unknown, reports suggest that developers are diligently working to resolve the final issues. Once the mainnet goes live, it is anticipated that the network's user base will expand, subsequently driving up demand for available tokens. As the network continues to see an influx of dApps, this user growth is expected to persist, further fueling token demand—a factor that typically contributes to asset price appreciation. Drawing parallels to Ethereum, which is widely considered a top altcoin, we'll explore its historical growth trajectory as a benchmark for Pi's potential in the decade ahead, from 2024 to 2034.

Pi Network Price Prediction 2024 - 2034: Since its launch at \$1.222, Pi has skyrocketed to a token value of \$200, representing a stunning 16,266% gain. By October 2018, the project boasted approximately 44 million unique wallets and a market cap of roughly \$25 billion. Pi made its unofficial debut on cryptocurrency exchanges with much anticipation, reaching a high of \$330.65 before experiencing a pullback. Currently trading at \$31.46, projections indicate that the token could potentially climb to \$58 by year's end, or possibly drop to \$18. As we look ahead to 2024 and beyond, the future of Pi Network remains bright, with analysts predicting further growth in the decade ahead.

Pi Coin Price Prediction 2025

In 2025, we could potentially witness a surge of developers flocking to the Pi ecosystem, attracted by its decentralization, low transaction costs, and energy efficiency. This influx of talent could significantly impact the Pi Network price, driving it upward based on the crypto market's situation at that time. However, it's crucial to note that the Pi Network will keep emitting tokens until the open mainnet goes live, and even beyond. If token emissions exceed the growth rate of Pi Network users, and thus exceed token demand, this could adversely affect the price. Nevertheless, if Pi continues to gain popularity among developers, who are likely to deploy decentralized applications (dApps) that have the potential to attract more users to the blockchain, we can anticipate an increase in token demand, and possibly, an increase in token price. Therefore, while the token emission rate remains a crucial factor to consider, the growth in popularity and utility of the Pi Network among developers could counterbalance its potential negative impact on price.

Pi Network Price Prediction 2024 - 2034: With multiple layer 1s competing for users, Pi Network's growth potential is significant. For 2025, we Prediction a low of \$28 and a possible high of \$73. Stay tuned for more insights on Pi Network's future value as we look ahead to 2034.

Pi Network Price Prediction 2030

Looking further into the future, by 2030 we're likely to see the token cap of Pi tokens in circulation hit, as the project's goal of 100 million users is expected to be reached. Currently, the team hasn't disclosed whether mining rewards will transition to another consensus mechanism or if another continued reward system will be adopted. Analysts predict a compound average growth rate (CAGR) of approximately 11.1% for the global cryptocurrency market. Assuming the Pi Network grows at slightly over half this rate, our Pi Network coin price prediction for 2030 estimates a potential high of \$98, with lows around \$35. While predicting crypto prices is inherently uncertain, technical indicators are often used by analysts and traders to Prediction digital asset trends, with [Bitcoin price](#) predictions also being a hot topic.

Considering BTC's status as the largest cryptocurrency, its price trajectory and overall health significantly impact other popular altcoins. Due to its market dominance, any fluctuations in [BTC](#) often set the tone for the broader crypto market, influencing the performance of various altcoins.

Pi Network Prediction - Potential Highs & Lows

To help investors swiftly determine Pi coin's value in any given year, we've crafted a convenient comparison table showcasing potential highs and lows. Explore Pi Network's Prediction and stay informed on its market fluctuations.

Pi Network Prediction - Potential Highs & Lows:

2024 Low: \$18, High: \$58

2025 Low: \$28, High: \$73

2030 Low: \$35, High: \$98

History of the Price of Pi Coin

When it comes to looking at how Pi Coin has performed historically, things can get a bit confusing. Since the network's mainnet is yet to be launched, there's no previous price data to reference. But don't worry, we're not flying blind here. Over the past year, we can still learn a lot from how the Pi Coin project has been operating. By examining its progress, community engagement, and overall development, we can gain valuable insights into its potential and future prospects. So, while there's no historical price data to analyze, there's still plenty to learn about Pi Coin's journey so far.

Coin Name	Pi Network (PI2)
Pi Network Price	\$37.50
Pi Network ATH	\$299.20 (December 30, 2022)
Pi Network Price Change 24h	-0.47%
Pi Network Price Change 7d	4.74%

Firstly, as Pi Coin operates differently from conventional crypto assets like [Bitcoin](#) and Ethereum, it merits a moment to comprehend its mechanics. The Pi Network revolutionized crypto mining by enabling individuals to mine directly from their smartphones, a concept that proved to be a resounding success, amassing over 30 million users at its height. Unlike many upcoming ICOs, Pi Coin chose a unique path: allowing users to mine coins on the testnet, which will eventually be migrated to the mainnet upon its launch. This strategic decision not only fostered a robust and devoted community but also ensured that every member has a personal stake in the project's prosperity.

To reward its earliest supporters, the Pi Team strategically decided to halve mining rewards as key milestones were reached. This occurred first when Pi Coin exceeded 100,000 users, then at 1 million, 10 million, and will culminate with a final halving at 100 million users. Once Pi made its debut on exchanges like Huuobi, BitMart, HotCoin Global, Biconomy, SupeEX, and XT.com, it gained

immediate traction. Riding on the coattails of Bitcoin's popularity and its own inherent value, Pi skyrocketed in price, surging from \$30 to an all-time high of \$330.65 within just 24 hours as 2022 drew to a close. This remarkable ascent was fueled by the anticipation and buzz surrounding the token, which had been building for the past two years.

In January 2023, Pi experienced a significant drop from its peak to \$44, rebounding to \$88 before stabilizing around \$48. Over the course of the year, the token underwent corrections, reaching a low of approximately \$18 in May. However, Pi made a comeback, climbing above \$20 and maintaining a trading range between \$20 and \$27 until late August. At this point, the token surged to a local high of \$57. Despite this upward momentum, Pi eventually settled into a trading range between \$30 and \$40, exhibiting a downward trend. This volatile journey highlights the dynamic nature of the cryptocurrency market and Pi's resilience within it.

History of Pi Coin's Price Evolution

Pi Coin, launched in 2019, has been gaining significant traction within the cryptocurrency community. While it currently lacks utility awaiting its mainnet launch, Pi's popularity has been steadily rising. Just a few months after its inception, the Pi Network boasted 100,000 users in June 2019, rapidly growing to 1 million users by April 2020. By December 2021, the network had amassed over 30 million users, indicating a strong community support and interest in the project. This surge in popularity led several exchanges to list Pi 'IOUs' in December 2022, causing prices to skyrocket. However, the Pi Network clarified that it is not affiliated with any exchange listings as of yet. Despite this, the closed mainnet, which launched in December 2021, signaled a significant milestone in Pi's development. Initial enthusiasm around Pi was immense, pushing its price to a staggering \$330.65 by the end of 2022. Although prices subsequently fell to a low of \$18 in May, Pi has recently stabilized within a trading range of \$30 to \$40, indicating a potential for further growth and adoption in the cryptocurrency market.

Pi Coin Background

With almost 40 million people actively mining and owning a Pi wallet, the launch of Pi coin created a massive buzz. Many enthusiasts saw an opportunity to accumulate tokens, aiming to sell at the peak price point, which was reached when the token hit \$330.65. The value of any cryptocurrency is largely influenced by supply and demand dynamics, and Pi's release will be a pivotal moment where these two forces clash. A significant buying pressure could potentially lead to a remarkable price rally, while a stronger selling pressure might temporarily suppress Pi's price until sellers exit the market. To gain insight into Pi's potential performance, it's worthwhile to delve into its whitepaper. According to the document, Pi's total supply is determined by combining mining, referral, and developer rewards. The coin's widespread hype and interest were further cemented in late 2022 when several exchanges unofficially listed Pi in the form of IOUs, indicating a high level of market anticipation and early demand.

The recent surge in the price of 'IOU' Pi coins, skyrocketing over 2,000% to a peak of more than \$300 each, has sparked tremendous interest in the cryptocurrency token. However, the Pi Network has warned its social media followers that the project has not authorized any exchange listing, cautioning that participation may lead to losses. Despite this disclaimer, the remarkable price jump underscores the market's enthusiasm for Pi coins. Yet, as often happens with such rapid pumps, the tokens experienced a significant dump, losing 78% of their value within just three days. This volatile price movement serves as a reminder of the risks and potential rewards inherent in the cryptocurrency market.

Where to Buy Crypto Coins

Although Pi might not be available for purchase yet, its impressive user count suggests that it will soon be listed on leading global exchanges. Currently, Pi Coin 'IOUs' can be found on exchanges like Huobi and XT.com. However, the Pi Network has warned its social media followers that these listings are unauthorized, advising against any purchases. Stay tuned for updates on where to buy Pi Coin safely and officially.

MEXC

Founded in 2018, the MEXC cryptocurrency exchange serves over 10 million users in more than 170 countries. With its spot and futures markets for cryptocurrencies, MEXC stands out with an unprecedented 0% spot trading fee for all users, a rarity in the industry. Developed by banking experts, the exchange boasts an impressive capacity to handle up to 1.4 million transactions per second, ensuring smooth and efficient trading. Beyond its markets, MEXC provides a comprehensive platform equipped with advanced tools for market analysis, trade execution, and strategy implementation. For those new to trading, MEXC's unique copy trading feature allows users to automatically mirror the trades of seasoned traders on the platform, making it an ideal choice for both experienced and novice investors.

A Savings platform allows users to lock up tokens and earn varying percentage rates. For even more convenience, the MEXC exchange provides a mobile app compatible with Android and iOS, supporting multiple payment and withdrawal methods. But that's not all—MEXC also boasts its own token, \$MX, offering holders exclusive perks like trading fee discounts, free airdrops, and more. With MEXC, you not only grow your crypto assets but also enjoy a suite of additional benefits just by holding \$MX. Don't miss out on the opportunity to maximize your cryptocurrency experience with MEXC.

When Will Pi Coin Launch?

Pi Coin's Open Mainnet is anticipated to go live in 2024, albeit without a precise date announced yet. Rumors suggest a possible Q2 2024 rollout, sometime between March and June. On December 27, 2023, the Pi Network team released a blog post revealing their intentions to kick off the Open Mainnet stage, emphasizing that this phase is set to unleash the full capabilities of the Pi blockchain, while carefully avoiding a firm launch timeline. If you're wondering where to buy crypto coins like Pi, stay tuned for updates as the Open Mainnet launch approaches.

Is Pi Coin Worth Anything?

Pi coins are not yet available for trading and will remain so until the mainnet goes live.

Nevertheless, some exchanges have begun allowing users to trade in Pi IOUs, a promise to repay borrowed funds. Over the past year, Pi coin IOUs have experienced a notable 37.81% price decrease. Although this decline offers a glimpse into the potential market value of Pi Coins once they're tradable, it doesn't necessarily predict the actual value of Pi Coin. If you're wondering where to buy crypto coins like Pi, keep an eye on exchanges offering Pi IOUs as they could be a precursor to actual Pi coin trading. However, remember that IOU prices, while insightful, are not a sure indicator of future Pi Coin value.

Is Pi Coin the Best Crypto to Invest in Today?

While Pi Coin is an intriguing project with potential, it's currently accessible only as an 'IOU,' meaning direct investment isn't possible without joining the network and mining Pi. Fortunately, we've identified another promising early-stage venture that's already making waves as one of the top crypto presales of the year: the 99Bitcoins token. Originating from the esteemed educational platform, 99Bitcoins, this token revolutionizes crypto education. It adopts a learn-to-earn approach, granting \$99BTC tokens to users engaged in educational pursuits. This not only advances cryptocurrency knowledge but also grounds the token in practical use, as it unlocks premium content on the 99Bitcoins platform. The token, thus, offers a unique blend of educational value and real-world application, marking it as a standout investment opportunity in the crypto sphere. For those seeking to expand their crypto portfolio, the 99Bitcoins token presents a compelling alternative to Pi Coin, given its accessibility and tangible rewards system.

Kickstarting community engagement, 99Bitcoins is excited to announce a \$99,999 Bitcoin airdrop for 99 early backers of the \$99BTC token. Scheduled for July 19th, 2024, participants can join in various ways: signing up on our platform, following our social media, or referring friends. This exciting event not only aims to jumpstart initial involvement but also to recognize and thank the early supporters of our vibrant community. Don't miss out on this unique opportunity to be a part of the crypto revolution and potentially receive a reward!

Comparing Price Predictions and Investment Potential

By the end of 2024, \$99BTC is projected to reach \$0.004, driven by upcoming exchange listings and the impact of Bitcoin's halving. Looking ahead, the token is poised for further growth, with expectations of hitting \$0.0088 by the close of 2025. This upward trajectory is fueled by an anticipated market rebound in the cryptocurrency sector and pivotal advancements in the platform's development. The long-term outlook is even more compelling, as the token is predicted to attain a remarkable \$0.045 by 2030. This substantial increase will be supported by the full rollout of operations and seamless integration into the blockchain ecosystem.

When comparing the potential of 99Bitcoins to Pi Coin, it's evident that both tokens offer exciting prospects. Pi Coin is predicted to rise from \$58 in 2024 to a staggering \$98 by 2030. However, the growth potential of 99Bitcoins is particularly noteworthy. From its projected high in 2024 to its expected peak in 2030, 99Bitcoins is anticipated to experience a phenomenal 1,025% increase. Conversely, Pi Coin is predicted to grow by 69% during the same period. This substantial disparity underscores the remarkable growth opportunities presented by 99Bitcoins. Investors seeking significant returns in the crypto market should keep a close eye on this emerging token.

The solid educational backbone, community-building efforts like airdrops, and the potential for significant token value appreciation, all make 99Bitcoins a strong investment choice over Pi Coin. While Pi Coin may be more established, its slower growth trajectory is overshadowed by 99Bitcoins' dynamic offerings. Investors seeking a cryptocurrency that combines educational depth, community engagement, and high growth potential will find 99Bitcoins a compelling alternative.

Conclusion

Throughout this guide, we've delved into the specifics of the Pi Coin project, offered our Prediction for Pi Coin's price, and explored a different crypto initiative with exceptional potential. Although Pi Coin "IOUs" have surged on various exchanges, it's crucial to bear in mind that the project itself hasn't sanctioned any listings and has advised against trading. Nevertheless, enthusiasts eager to invest in Pi and wanting to use a reputable exchange like MEXC, have the option to purchase 'IOU' tokens in preparation for the Open Mainnet debut scheduled for later this year.
