## Key Features of Solaxy

As Solana's Layer-2 solution, Solaxy takes what's best about Solana and enhances it in ways not previously seen. Solaxy combines Solana's strengths with innovative roll-up architecture. Instead of bogging down the Layer-1 network, Solaxy processes transactions off-chain. This results in less congestion and keeps things running smoothly.

What's more, transaction bundling is another strategy. Solaxy inherits Solana's robust security by finalizing bundled transactions on the mainnet. Here, transactions are grouped into batches. That makes the system faster, cost-efficient, and scalable.

Finally, Early investors can earn 550% APY through Solaxy's staking portal, with rewards distributed consistently over three years. This combination of features has led analysts to suggest that Solaxy could rival major tokens like Polygon (MATIC) and Arbitrum (ARB) in performance.

## Solaxy (\$SOLX) Staking

Solaxy encourages long-term commitment to the token through passive rewards. This is achieved through a staking system.

Generous staking rewards is regarded as one of the standout features of the Solaxy presale. Right from the presale phase, investors can stake their \$SOLX tokens to earn passive income.

Staking \$SOLX tokens now offers an APY of **306%**. With over 3.7 billion \$SOLX tokens already staked, this provides great value and reflects solid participation from the community.

Staking dampens the tendency to sell off early-stage tokens by incentivizing holding. By staking their \$SOLX tokens, the investors impact the price stability of the tokens, creating a win-win situation.

The \$SOLX presale price will gradually increase, and the staking APY will decrease as more tokens are staked.
