Tether Unveils New Gold-Backed USD-Pegged Stablecoin Alloy (aUSDT): A Close Look At Alloy (aUSDT)

On June 17, Tether launched a new token minting platform called Alloy By Tether on the Ethereum network that lets users create tokens collateralized by Tether's tokenized gold (XAUT). This marks the issuer's tethered asset debut, with Alloy (aUSDT) mintable through the new platform. Tether CEO Paolo Ardoino announced that Alloy would soon become part of Tether's broader tokenization venture, aiming to revolutionize digital asset creation.

What is Alloy By Tether?

Developed by Moon Gold NA S.A. de C.V. and Moon Gold El Salvador S.A., both members of the Tether Group, Alloy by Tether is an open platform that allows the creation of various Tethered Assets with broader backing mechanics, potentially including yield-bearing products. This flexibility enables the platform to cater to different customer segments and regulatory requirements.

Specifically, this new token minting platform can help create tokens that use Tether Gold as collateral, as opposed to the cash and cash equivalents used for backing USDT, the world's largest stablecoin by market capitalization.

CEO of Tether, Paulo Ardoino said "Alloy by Tether is an open platform that allows to [users] create collateralised synthetic digital assets and will soon be part of the new Tether digital assets tokenisation platform, launching later this year."

What is the aUSDT Token?

The first “Tethered Asset” to be produced using this concept is aUSDT, a USD-denominated token. aUSDT is a synthetic dollar over-collateralised by XAUt (Tether Gold). According to Tether, the over-collateralized coin will help holders gain exposure to gold, a proven store of value asset, while at the same time allowing them to use it in payments and day-to-day operations.

aUSDT aims to provide the functional advantages of using the US dollar, such as its wide use in payments, trading, settlements, and savings, while incorporating the intrinsic benefits of gold, such as scarcity, low volatility, and preservation of purchasing power.

Notably, Tether’s aUSDT is not the first synthetic dollar. In August 2022, Galoy introduced a Bitcoin-based synthetic dollar called Stablesats on the Lightning Network.

Significance of aUSDT Launch

Notably, the tokenization of real-world assets i.e, bringing off-chain assets like real estate, bonds, and commodities on blockchain rails, has emerged as one of the hottest narratives in Web3.

Earlier this year, asset management giant BlackRock launched the BlackRock USD Institutional Digital Liquidity Fund (BUIDL), allowing investors exposure to cash equivalents like U.S. Treasury bills through digital tokens.

Tether’s launch of a gold-backed synthetic dollar, aUSDT, represents another milestone in expanding the company’s stablecoin offerings. By leveraging the Alloy by Tether platform, users can now access a digital asset that combines the stability of the US dollar with the intrinsic value of physical gold.
